

Contact Tracing Staffing

Public health leaders widely agree that communities need to ramp up capacity to test, trace, and isolate cases of COVID19. The idea behind this is simple: Keep the virus in check by having teams of public health workers — epidemiologists, nurses, trained citizens — identify new positive cases, track down their contacts and help both the sick person and those who were exposed isolate themselves. These methods have been successful in other countries including South Korea, China and Germany.

This effort involves massive hiring of staff to complete the labor-intensive process of contact tracing. Crossfire is uniquely positioned to provide contact tracing staff to help track and isolate patients infected with the novel Coronavirus. Crossfire has been in business for over 20 years servicing Fortune 500 businesses as well as government agencies. We have a team of local NY based recruiters who specialize in high volume and high speed recruiting. Our teams have all been training on contact tracing best practices and we have access to a wide network of potential contact tracing professionals.

Crossfire has provided surge staffing services to fill many positions and staff large projects within a short time-frame. We have established ourselves in this unique niche by onboarding between 120 and 1,100 professionals for development projects more than 5 times in the last 6 years. Our performance has earned us accolades, long-term contracts, and most importantly, incredible goodwill across wide swaths of major companies.

Now is the time to staff contact tracers so that the United States is prepared to properly isolate new cases as we re-open. Crossfire's team is prepared to assist state and local governments in these efforts.
